

# 2018 COMMERCIAL HEATING INCENTIVE APPLICATION

## ELIGIBILITY

- Energy efficient electric heating systems are available to commercial and agricultural retail customers who purchase and install new electric heating equipment.

## REQUIREMENTS AND CRITERIA

- The commercial electric heat program applies only to structures receiving electric service from the Cooperative.
- The electric heating equipment must be permanently installed.
- A rebate of \$50 per ton is available up to a maximum of 150 tons for commercial facilities installing a heat pump system or a rebate of \$10 per kW of electric resistance heating up to a maximum of 600 kW.
- A special electric heat rate may be offered unless there is a contractual rate that has been agreed upon and is lower than the electric heat rate (ie. large power accounts).
- The customer will pay the cost of the equipment for three-phase sub-metering. Submetering is offered free for heat pumps or over 5 kW of electric resistance heating equipment. A \$200 fee applies for electric resistance equipment 5 kW and under. Apartment complexes may be eligible for free submetering up to 8-units (some restrictions apply). Tenants may receive a reduced basic service fee in all-electric complexes over 8 units.
- Equipment must be purchased and installed before an energy efficiency incentive is issued.
- Rebate dollars are limited and are offered on a first come, first served basis. Programs can be changed or cancelled without notice.
- The Cooperative will issue reimbursement via check if the rebate is \$200 or above; otherwise it will be applied as a bill credit to the account. The program is valid through December 31 of the current year.

## How to Apply

1. Complete the following rebate application.
2. Attach proof of purchase for the electric heating equipment purchase which includes a sales receipt(s) or invoice(s) itemizing the new equipment and indicating the size, type, make, model, purchase date, efficiency and vendor.
3. Return completed application and supporting documentation to:
